

Animalfeeds is pleased to announce to the IFFO community that the most modern technology of low-temperature vacuum deodorized and physical refined fishoil intended for high quality petfood and aquaculture feed ingredients has completed the final construction steps and achieved HACCP status. The start up process follows different plant audits to fulfil international certification standards for safe animal ingredient inclusion.

The new processing plant was commissioned by Industrial Maule Ltda. to DeSmet Ballestro, a leading refinery manufacturer from Belgium. The plant is located in Coronel, Chile at the hearth of salmon, anchovy and sardine fisheries which are among the most demanded fish oil species into aquaculture and petfood formulations around the world.

A complete line of refined and deodorized fishoils to be manufactured under the 'AntarcticOmega' brand is intended to reach the international market during Q1-2019.

AntarcticOmega is distributed by ANIMALFEEDS in the United States from their facilities in Port Arthur, Texas while international orders are shipped directly from Coronel, Chile.
